Sources: national databases; data gathering and calculation by GOG in the framework of the PPI (Pharma Price Information) service

[illegible]

CZ: Due to the remuneration scheme for distribution actors there is no common country wide PPP in these countries.

DK, FI, NL, SE and UK: Pls. note that in these countries the manufacturer price is computed via average wholesale mark-ups/margins therefore slight deviations may occur.

AT: Only private customers (who account for approx. 30% of pharmacy sales) pay the PRP, the sickness funds (which account for 70% of pharmacy sales) pay a significantly lower price, the so-called reimbursement price ("Kassenpreis").

HR: Pharmacy remuneration equals a dispensing fee based on the assumption of 1 pack of that medicine on the prescription

IE: For reimbursable products no pharmacy markup is added to the PPP, however, a dispensing fee is applied by the pharmacy.
